## 🧑 ABOUT ME

With over three years of web development and design experience in fast-paced and dynamic agency and startup environments, I bring a persistent and curious approach to design, development, implementation, and teamwork. I enjoy both web design and full-stack software development, though I find myself most excited on the frontend of the stack.

## 🔧 SKILLS

- Website design
- Design systems
- Prototyping
- Data & content architecture
- HTML
- CSS + Bootstrap & Tailwind)
- SCSS
- JavaScript (ES6+)
- Vue.js
- React
- Alpine.js
- Inertia.js
- jQuery
- Ruby
- Ruby on Rails
- Node.js
- Express
- PHP
- Drupal
- Wordpress
- SQL
- MongoDB
- AWS
- Twilio Flex

## 🎓 EDUCATION

Pinnacle High School - Class of 2012

## 💼 WORK EXPERIENCE

### Flows.ai

Software Developer  
March 2021 - Present

Working at Flows.ai, I have been able to gain a better understanding of several new areas of software development, including serverless architecture using AWS, integration with communications platforms, and modern front-end development utilizing JavaScript frameworks like Vue.js and React. Throughout my time at Flows.ai, I have prototyped, designed, and participated in aspects of the implementation of various solutions to provide clients with communications tools, optimizations, and analytics to augment and automate their marketing and call center operations. This role exposed me to Ruby, Ruby on Rails, React (through Twilio Flex plugin development), Vue.js and Inertia.js implementations for our application, AWS (API Gateway, DynamoDB, RDS, Lambda), and furthered my backend and database knowledge.

### Tangent Digital

Drupal Developer and Web Designer  
September 2017 - February 2021

Working at Tangent, a budding web development and marketing agency, provided me a fast-paced and dynamic environment to build on my self-taught web design and development skills through working on projects for a variety of clients. Given the fact that I was the only full-time employee, I wore several hats and have had responsibilities such as the following:

- Requirements gathering, scope definition, pricing and estimates
- Interviewing, on-boarding, and managing contract development personnel
- Managing projects in various PM tools to measure cost, time estimates, workloads, and individual tasks and initiatives
- Defining and documenting design and development assets, libraries, and procedures
- Production of wireframes, screen designs, and prototypes
- Evaluating tools and services for specific projects and for the agency at large
- Full-stack development leveraging Drupal 8 as a web framework to build custom modules and complex themes and frontends
- Planning for third-party API integrations and determining the structure, approach, and scope of arbitrary implementations
- Working with QA teams to test feature implementations and their overall functionality
- Communicating directly with project stakeholders of various technical backgrounds
- Troubleshooting and maintaining existing projects
