👤 ABOUT ME

With over three years of web development and design experience in fast-paced and dynamic agency and startup environments, I bring a persistent and curious approach to design, development, implementation, and teamwork. I enjoy both web design and full-stack software development, though I find myself most excited on the frontend of the stack.

🔧 SKILLS

- Website design
- Design systems
- HTML
- CSS + Bootstrap & Tailwind
- SCSS
- JavaScript (ES6+)
- Vue.js
- React
- Alpine.js
- jQuery
- Ruby
- Ruby on Rails
- Node.js
- Express
- PHP
- Drupal
- AWS

🎓 EDUCATION

Pinnacle High School - Class of 2012

💼 WORK EXPERIENCE

Elevated Third

Drupal Developer
October 2021 - Present

During my time at Elevated Third, I have contributed to the implementation and launch of several Drupal websites in a primarily front end capacity. This role has required me to work directly with internal and external project stakeholders with varying technical knowledge, and has also pushed me to continue building on my Drupal knowledge through building and maintaining custom themes and modules. I have also worked with the Contentstack CMS platform in this role, as well as React and Gatsby on the frontend for projects using this platform.

Flows.ai

Software Developer
March 2021 - October 2021

Working at Flows.ai, I was able to gain a better understanding of several new areas of software development, including serverless architecture using AWS, integration with communications platforms, and modern front-end development utilizing JavaScript frameworks like Vue.js and React. Throughout my time at Flows.ai, I have prototyped, designed, and participated in aspects of the implementation of various solutions to provide clients with communications tools, optimizations, and analytics to augment and automate their marketing and call center operations. This role exposed me to Ruby, Ruby on Rails, React (through Twilio Flex plugin development), Vue.js and Inertia.js implementations for our application, AWS (API Gateway, DynamoDB, RDS, Lambda), and furthered my backend and database knowledge.

Tangent Digital

Drupal Developer and Web Designer
September 2017 - February 2021

Working at Tangent Digital, a small web agency, as a Drupal Developer and website designer exposed me to a number of phases of the software development lifecycle and required me to plan, design, implement, and maintain websites and app experiences. This role required me to use modern design tools, PHP, HTML, CSS & SCSS, modern JS, and cross-browser and accessibility testing tools, specifically on the Drupal platform, across versions 7, 9, and 9. I also have built extensive custom themes, lightweight custom modules, integrated with third-party APIs, and have provided documentation and user guides for our projects.
